EVLI INFRASTRUCTURE FUND II ESG REPORT 2025

05/2026

EVLI FUND MANAGEMENT COMPANY LTD

This ESG report is Evli's own report about the Fund. The Article 8 and 9 Funds' sustainability information in accordance with EU Sustainable Finance Disclosure Regulation is reported separately to the fund's investors.

CONFIDENTIAL

EVLI

Evli Infrastructure is committed to responsible investment

Evli Infrastructure believes that integrating environmental, social and governance factors into investment and decision–making processes is important for the long–term success of the portfolio and essential to better understand the risks and opportunities associated with investments.

Responsibility is integrated into all areas of Evli Infrastructure's investment operations and the funds are managed in accordance with Evli's Principles for Responsible Investment. Evli Infrastructure engages actively with fund managers to promote responsible investing. Evli Infrastructure believes that there is a positive connection between strong ESG[1] performance and strong financial performance.

RESPONSIBILITY AT EVLI PLC LEVEL:

Responsibility is an important area of strategic priority for Evli Plc, and the ESG factors have been integrated into all investment activities at Evli. Evli has a Responsible Investment Executive Group, which is accountable for the principles and practical guidelines for Evli's responsible investing.

Evli Plc has been a PRI[2] signatory since 2010 and is following the PRI's guidelines for responsible investing. Evli has been an investor member of the CDP (former Carbon Disclosure Project) since 2007 and a member of Finsif (Finland's Sustainable Investment Forum) since 2010. In 2022 Evli strengthened its climate commitment by signing the Net Zero Asset Managers initiative. In addition to the analysis and monitoring of responsibility factors, Evli regards engaging with investment targets as being of significant importance. Evli is involved in several collaborative engagement projects, such as the CDP's investor letters, the Climate Action 100+ project and Nature Action 100.

[1] ESG stands for Environmental, Social and Governance, and it means factors related to environmental, social and governance issues.
[2] PRI stands for Principles for Responsible Investment and is a responsible investment umbrella organization supported by the UN.

EVLI

OUR COMMITMENT TO ESG

"Evli Infrastructure believes that integrating ESG factors into investment and decision-making processes is important for the long-term success of the portfolio"

CONFIDENTIAL

EVLI

Evli Infrastructure's Principles for Responsible Investment

1. ESG analysis and ESG rating

Analysis of factors related to ESG is a systematic part of the investment process. Evli Infrastructure's approach to ESG integration is driven by the need to understand the fund managers' commitment to ESG, how they integrate ESG factors in different stages of the investment process, and how the fund managers report on their progress in ESG. Based on Evli Infrastructure team's assessment each target fund receives an ESG rating reflecting how well the fund manager has taken into consideration the risks and opportunities associated with responsibility.

2. Exclusion

Evli Infrastructure will not make new commitments into funds managed by companies which do not have their own ESG policies and are not committed to responsible investment practices. When deciding on new investments, Evli Infrastructure evaluates the fund's exclusion policies and avoids investments into sectors excluded by Evli[1]. As a fund of fund manager, Evli Infrastructure may, in certain circumstances, deviate from Evli's exclusion criteria.

4. Reporting

Evli's responsible investing is based on transparency and openness, which is why ESG factors are reported comprehensively to clients. Evli Infrastructure ESG reporting consists of an annual ESG report, ESG scores as part of the quarterly reporting and reporting to the PRI as part of Evli's PRI reporting. In addition, information in accordance with the Sustainable Finance Disclosure Regulation (SFDR) is reported from Evli Infrastructure funds.

3. Monitoring & engagement

Evli Infrastructure monitors and evaluates the fund managers' ESG practices and performance regularly through Evli's annual ESG questionnaire and fund managers own ESG reporting, as well as through active dialogue with fund managers on ESG. Evli's ESG questionnaire is send out to all fund managers each year and through the questionnaire Evli Infrastructure team assesses fund managers' ESG performance and practices. The annual ESG assessment facilitates the engagement with fund managers by highlighting excellence and flagging areas for improvement in the field of ESG.

[1] In accordance with Evli's general exclusion principles, manufacturers of controversial weapons with a 0% revenue threshold, and tobacco manufacturers, adult entertainment producers and controversial lending companies (including so-called 'payday loan' companies) with a 5% revenue threshold are excluded. In addition, Russia is excluded as a region where investments can be made. The exclusion covers both Russian companies and the Russian state. In addition, investing in companies with more than 10% of their revenue coming from thermal coal mining, its use in energy production, or oil sand extraction is avoided and companies producing peat for energy production are excluded. Evli does not finance new coal-fired power plants, coal mines or oil sands projects that are in the planning or construction stages.

EVLI

ESG assessment of fund managers

ESG due diligence and analysis is an essential part of our investment process. Before making a commitment to a target fund, the team assesses fund managers' commitment to ESG, and how they consider ESG factors in their investment, ownership and reporting practices. In connection with the assessment the target fund receives an ESG rating. In case of low ESG score, Evli Infrastructure engages with the fund manager to discuss the areas for improvement. In addition, Evli Infrastructure aims to correct any shortcomings, for example in the fund's exclusion or reporting policy, in the side letter negotiations.

Evli Infrastructure will not invest in funds that are managed by companies which are not committed to responsible investment practices. The fund managers need to have an ESG policy and ESG reporting in place, and they are expected to take into consideration ESG factors in their investment processes.

AREAS COVERED IN THE ESG ASSESSMENT OF FUND MANAGERS:

Commitment & policies

- What is the fund's ESG policy
- Is the manager a PRI signatory or committed to any other international ESG standards or guidelines
- How is the ESG incorporation implemented and how are ESG responsibilities structured in the manager's organization
- Does the fund have an exclusion policy
- Does the fund have climate policy and climate targets

Investment process

- How is ESG analysis for potential investments and due diligence on potential ESG risks and opportunities conducted
- How do ESG risks and opportunities affect the selection of investments
- Are ESG–related considerations integrated into deal documentation such as Shareholders' Agreements during deal structuring

Ownership phase

- Are ESG issues incorporated in value creation plans
- How is it ensured that adequate ESG competences and resources exist at the portfolio company level
- How does the manager contribute to the management of ESG risks and opportunities of the investments
- Which ESG KPIs[1] are tracked and how the KPIs are used
- Are ESG considerations part of the exit preparations

Reporting

- How does the fund communicate and report to its investors on ESG matters
- Does the manager report progress on ESG performance including data and targets
- Are GHG[2] emissions associated with the investments reported
- Is ESG a topic at investor meetings and advisory board meetings
- How are possible ESG incidents reported to investors

[1] Key performance indicators
[2] Greenhouse gas

EVLI

Evli's ESG rating system for target funds

As part of the ESG due diligence and analysis every target fund is assigned an ESG rating. The ESG rating is based on the Evli Infrastructure team's assessment of the target funds and their fund managers' ESG commitment and processes. During the due diligence phase all target funds are asked to fill out Evli's comprehensive ESG Due Diligence Questionnaire.

The ESG rating consists of four main areas (share of total points):

1) ESG commitment and policies (20%)

2) ESG in investment process (20%)

3) ESG in ownership phase (30%)

4) ESG reporting and disclosure (15%)

5) In addition, Evli has raised climate, biodiversity, and diversity,equity & inclusion as separate themes in the evaluation (15%)

After the investment is made the investment team continues to monitor the ESG performance and development of the target funds. As part of the monitoring the ESG assessment is repeated yearly by sending out Evli's Annual ESG Questionnaire to the target fund managers. If there are significant changes in the fund managers ESG approach or practices, the ESG rating of the target fund can be adjusted.

THE FUNDS ARE GRADED ACCORDING TO THE FOLLOWING POINT SCALE:

≥90%	Excellent
80–90%	Very Good
65–80%	Good
50–65%	Adequate
35–50%	Poor
<35%	Not acceptable

The maximum score from the ESG assessment is 100%.

EVLI

Summary of changes to the 2025 ESG questionnaire and scoring

Compared to the previous year, some updates were introduced in 2025 to the questionnaire and scoring:

	Effect on scoring:
ESG Commitment & Policies — This year, we scored the question about formal ESG commitments included in LPAs and other fund documentation	This decreased the points of some managers, who do not have documented ESG commitments.
Environmental Section — Greenhouse gas emissions and renewable energy data were systematically collected this year. — A new question on biodiversity targets was added, as well as a question about measuring the share of investments located in biodiversity–sensitive areas.	No effect on scoring.

Social Section
— Expanded to include new questions on:
  — Diversity targets
  — ESG–related policies and manuals at both management company and portfolio company level
  — Approach to DEI in recruitment and investment processes
	Some of these additions impacted scoring, resulting in lower Social scores for certain managers compared to previous year.

Apart from these updates the questionnaire and the scoring methodology remain the same and is largely comparable with previous years.

CONFIDENTIAL

EVLI

Evli Infrastructure Fund II — ESG overview

Evli Infrastructure Fund II Ky is a 2022 vintage fund that has committed in seven target funds globally.

86% of the target funds are rated Excellent

The average ESG rating of the target funds slightly decreased compared to the previous year due to changes in the scoring (see p. 7) and was 94.5%. All target funds received an ESG rating of 'Excellent' or 'Very Good'.

100% of the target fund managers are PRI[1] signatories

All target fund managers are PRI signatories. with 86% also committed to TCFD. 43% of the fund managers have been PRI signatories already since 2015 or earlier. Currently, 29% adopt TNFD, 71% are committed to EDCI, 57% are committed to ICI and 29% are GRESB members.

EVLI

Evli Infrastructure Fund II — ESG overview

All Evli Infrastructure Fund II target fund managers are committed to ESG, have integrated ESG in their investment processes and have ESG reporting in place. However, there are still significant differences in the level of ESG integration between fund managers.

	Areas of excellence	Areas for improvement
ESG commit. & policies	+ All fund managers have their own ESG policy and are PRI[1] signatories + All of them have an exclusion policy + All of them provide regular ESG training	– Many of the managers don't include formal ESG commitments in the LPA or other constitutive fund documents – ESG objectives not always integrated in performance reviews
Investment process	+ All fund managers have integrated ESG in their investment process + ESG is part of the investment decisions	– ESG–related considerations not always integrated into deal documentation such as Shareholders' Agreements during the deal structuring phase.
Ownership	+ All managers contribute to the management of ESG risks and opportunities. + All of them measure, monitor and track ESG KPI:s for the investments + ESG considerations always part of exit preparations + Most of the managers seek to determine if/how their ESG approach has affected the financial performance	– Some of the managers do not link ESG objectives to compensation mechanisms at the portfolio company level – KPI targets not always set for portfolio companies
Other	+ All fund managers have integrated ESG as a part of their reporting. + All of them will report GHG emissions + All of them consider climate and biodiversity when making and managing investments	– Some of the managers have not set any official climate targets – Many of the managers do not set any diversity targets – Some of them do not require any DEI policies or code of conducts from portfolio companies

No major ESG incidents have been reported in any of the Evli Infrastructure Fund II target funds during the last 12 months.

ESG assessment of co–investments

In addition to fund investments, Evli Infrastructure Fund II has made two co–investments.

	Co–Investment 1	Co–Investment 2
Fund manager:	Fund E	Fund H
Fund manager's ESG rating:	93%	94%
Company–level ESG practices:		
ESG strategy:	Yes	Yes
GHG emissions measurement & reporting:	Yes – GHG Protocol Scope 1–3	Yes – GHG Protocol Scope 1–3
GHG emission reduction target:	No	Yes – aligned with a net zero pathway
Renewable energy share measurement:	Yes	Yes
Code of Conduct / Ethics policy:	No	Yes
Diversity, Equity, and Inclusion policy:	No	Yes
Diversity metrics tracking:	Yes	Yes

CONFIDENTIAL

Focus on climate

In June 2021 Evli set its own climate targets. Evli aims to be a net zero asset manager at the latest by 2050 and has set an interim target to halve the carbon emissions of its investments by 2030. Read more about Evli's Climate Targets here: Evli's Climate Targets. In 2022 Evli strengthened its climate commitment by signing the Net Zero Asset Managers initiative. Evli's climate targets were re-evaluated in 2025 to ensure that the targets remain aligned with the objectives of the Paris agreement.

Climate is taken into consideration in the different phases of Evli Infrastructure's ESG process:

Pre-investment

Before committing to a target fund Evli Infrastructure evaluates:

- Fund managers' strategy and capacity to address climate-related risks and opportunities (incl. frameworks and tools used)
- Fund managers' commitments and targets relating to climate
- Scope of fund managers reporting on climate (incl. reporting on greenhouse gas emissions and renewable energy consumption)

In addition, Evli aims to include climate-related considerations in side letters negotiated with fund managers. In line with Evli's exclusion policy (page 4), carbon intensive sectors will be excluded.

Post-investment

After committing to a fund Evli Infrastructure:

- Monitors fund managers' development and performance related to climate work and climate targets through Evli's ESG Questionnaire, fund managers' own reporting, annual meetings and one-to-one meetings with managers
- Annually asks climate related data from fund managers including greenhouse gas (GHG) emissions and the share of renewable energy consumption on target fund level

With data collected and, if necessary, by using estimates Evli Infrastructure aims to monitor the development of GHG intensity over years on both target fund level and on fund-of-funds level.

EVLI

Climate work on target fund level

- In 2025, the share of Evli Infrastructure Fund II target funds' fund managers with climate target is 71% and remained the same compared to the last year. These managers have a net–zero or carbon neutrality target with a clear timeframe. The rest of the fund managers have started their climate work meaning that the fund manager acknowledges the importance of climate action and has started to look for ways to contribute to climate targets. These fund managers support the transition to low–carbon or net zero economy but has not yet set official climate targets.

- All the target funds' fund managers report greenhouse gas (GHG) emissions associated with their investments. In addition, 86% of the fund managers report their Scope 3 emissions.

- The proportion of fund managers measuring the share of renewable energy consumption as a percentage of total energy consumption in their portfolio remained the same compared to previous year and was 100% in 2025.

71%

of the target funds' fund managers have a net–zero or carbon neutrality target.

100%

of the target funds report GHG emissions associated with their investments.

100%

of the target funds measure the share of renewable energy consumption in their portfolio.

Portfolio carbon footprint

WACI [1]

Scope 1 & 2 weighted average carbon intensity (tCO2e/$M sales): 707

Coverage of the WACI analysis: 78 %

Financed–emissions intensity [1]

Financed emissions scope 1 & 2 (tCO2e/$M invested): 838

Coverage of the financed emissions analysis: 88 %

Information is based on the 2024 data reported by the fund managers.

[1] The Fund's weighted average carbon intensity is calculated by dividing investment's scope 1 and scope 2 greenhouse gas emissions by revenue, and financed–emissions intensity is calculated by dividing investment's scope 1 and scope 2 greenhouse gas emissions by invested amount. The carbon footprint figures are the sum of underlying funds' carbon footprints apportioned based on portfolio weights. Scope 1 greenhouse gas emissions refer to emissions directly occurring from sources that are owned or controlled by the portfolio companies. Scope 2 greenhouse gas emissions refer to indirect emissions generated in the production of electricity purchased by the portfolio companies.

CONFIDENTIAL

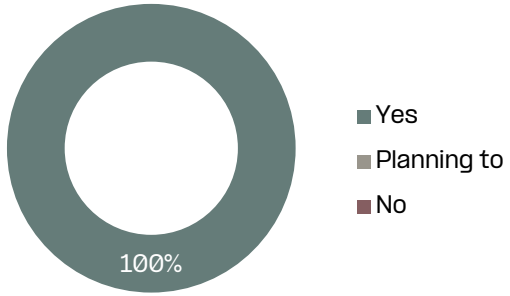
Biodiversity

In recent years, responsible investment has evolved from a primary focus on climate change and greenhouse gas emissions to a broader sustainability agenda that increasingly recognizes biodiversity[1] loss as a material financial risk.

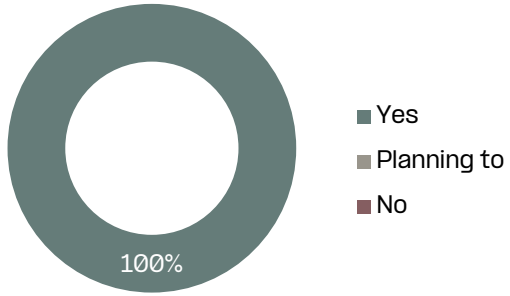
Businesses and investors play a crucial role in addressing biodiversity loss. Evli Infrastructure has therefore made biodiversity as a distinct topic in its ESG questionnaire to assess fund managers' approaches to nature-related risks and opportunities and simultaneously raising awareness of the topic among fund managers.

All of Evli Infrastructure Fund II target funds' managers take biodiversity into consideration when making, and monitor and report biodiversity related indicators. One of the managers has also set biodiversity related targets.

BIODIVERSITY CONSIDERED IN INVESTMENTS (% OF TARGET FUNDS)



BIODIVERSITY RELATED INDICATORS MONITORED (% OF TARGET FUNDS)



[1] Biodiversity or biological diversity is the variety and variability of life on Earth. Biodiversity is a measure of variation at the genetic, species, and ecosystem level.

Evli's Climate and Nature Principles set the framework for climate and nature work. As these themes are strongly interconnected, Evli aims to advance both in a mutually supportive way.

Evli has had climate change principles since 2019 and a biodiversity roadmap for 2023–2025. The Climate and Nature Principles were published in November 2025 to continue and further enhance biodiversity's integration into investment analysis.

In January 2024 Evli became a TNFD Early Adopter. Taskforce on Nature-related Financial Disclosures (TNFD) is a market-led, science-based initiative that has developed a reporting framework on nature for financial institutions and organizations. Evli continues to report in line with the TNFD recommendations as part of its annual reporting. Evli aims to develop its biodiversity analysis and reporting to cover all asset classes and is developing its biodiversity reporting for alternative investments.

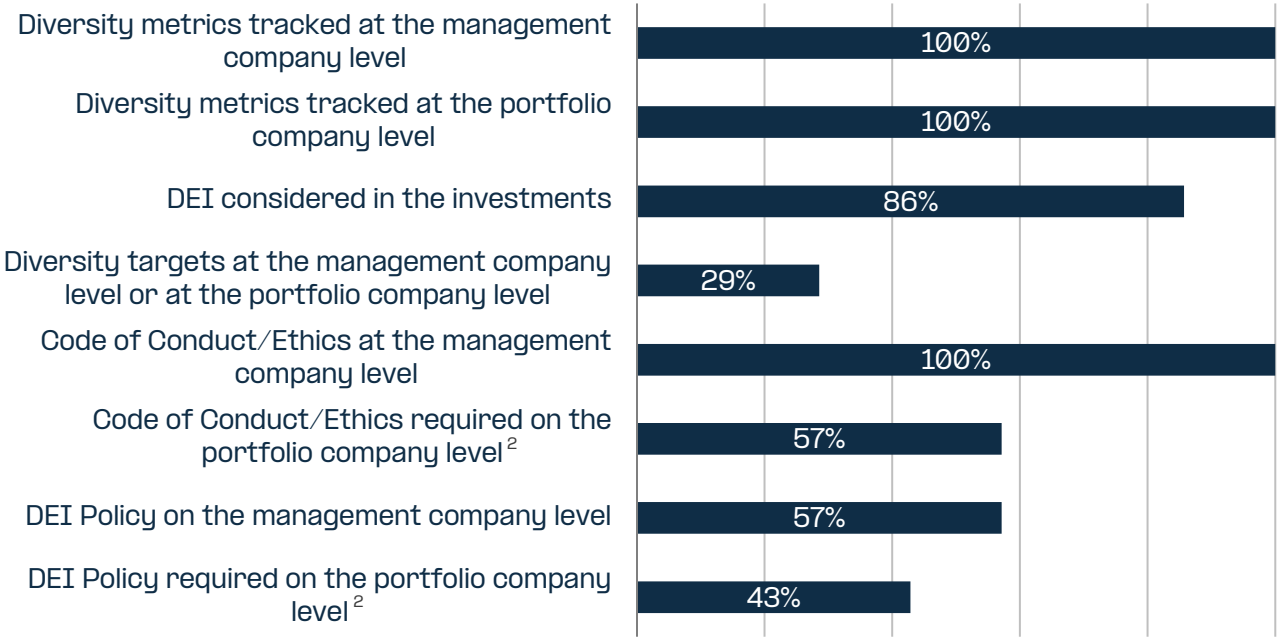
Evli Infrastructure Fund II target fund managers were surveyed on ESG practices, including biodiversity. Two of the managers have committed to TNFD and two are exploring it as an option.

CONFIDENTIAL

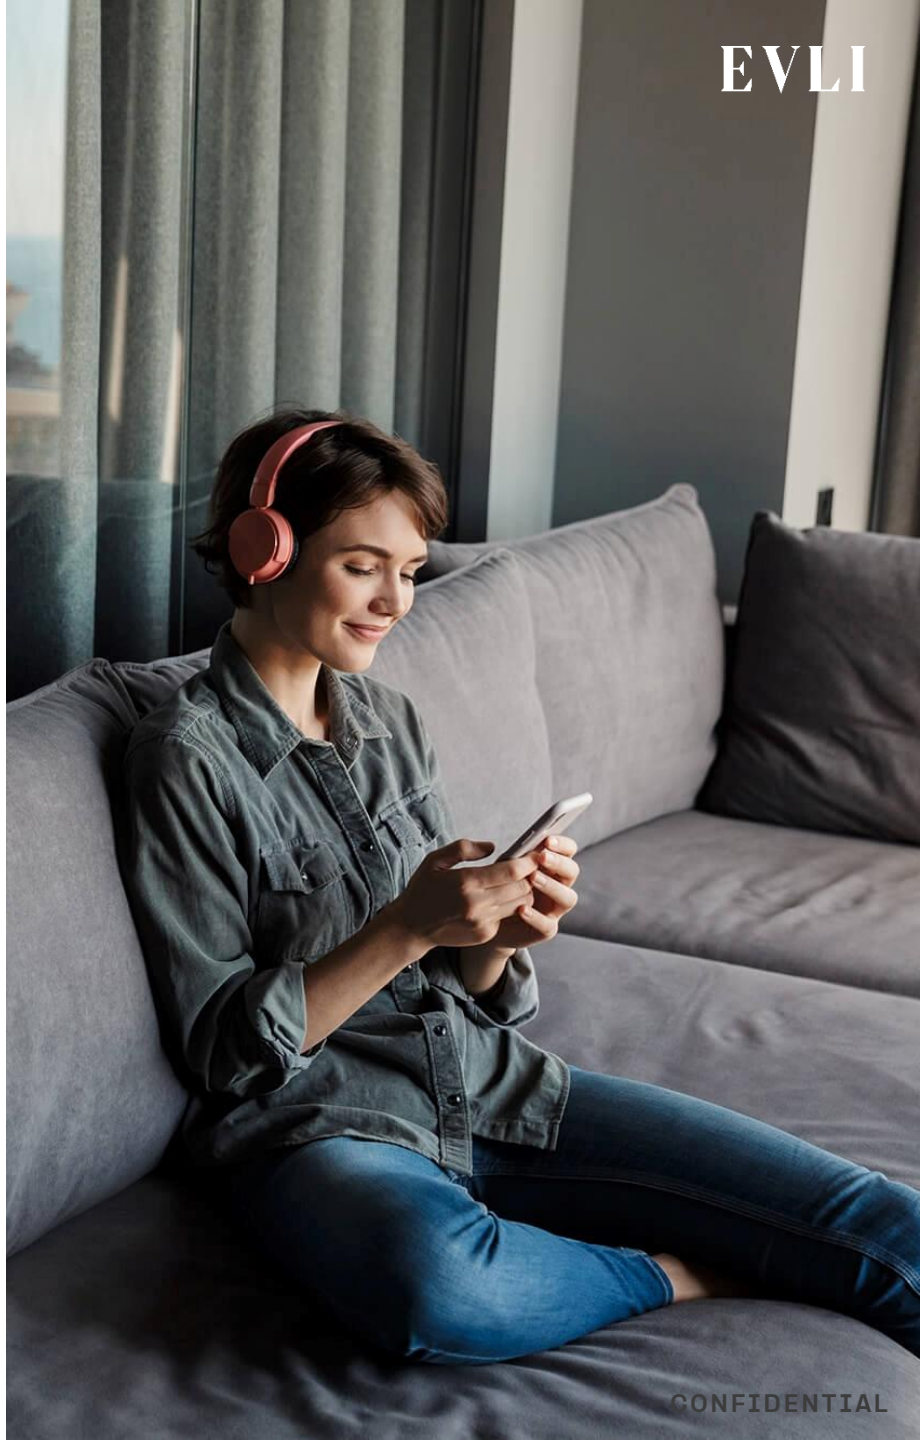
Diversity, Equity and Inclusion

A just, equitable and inclusive society—where everyone has equal opportunities to participate and reach their full potential—is fundamental to sustainable economic growth and long–term business success. As part of the Social dimension of ESG, Evli Infrastructure recognizes Diversity, Equity and Inclusion (DEI)[1] as key drivers of resilient organizations, responsible governance, and positive societal impact.

DIVERSITY, EQUITY AND INCLUSION RELATED METRICS (% OF TARGET FUNDS)



[1] Diversity, Equity and Inclusion (DEI) refers to policies and practices that promote representation of different demographic groups (diversity), ensure fair treatment and equal access to opportunities (equity), and foster a culture where all individuals feel respected, valued and able to contribute fully (inclusion). [2] Many fund managers encourage their portfolio companies to adopt these policies but do not explicitly require them.



CONFIDENTIAL

EVLI

SFDR

In accordance with the Sustainable Finance Disclosure Regulation (SFDR), Article 6 funds may take sustainability risks into account, but do not promote environmental and/or social characteristics and do not have an objective to make sustainable investments. Article 8 funds promote environmental and/or social characteristics in addition to other characteristics and Article 9 funds investment objective is to make sustainable investments.

Evli Infrastructure Fund II SFDR

Article 8

Evli Infrastructure Fund II promotes sustainability factors as part of its investment activities by integrating sustainability factors into the due diligence process carried out prior to investment, assessing fund managers during the investment period, excluding certain industries, and engaging with fund managers through active dialogue.

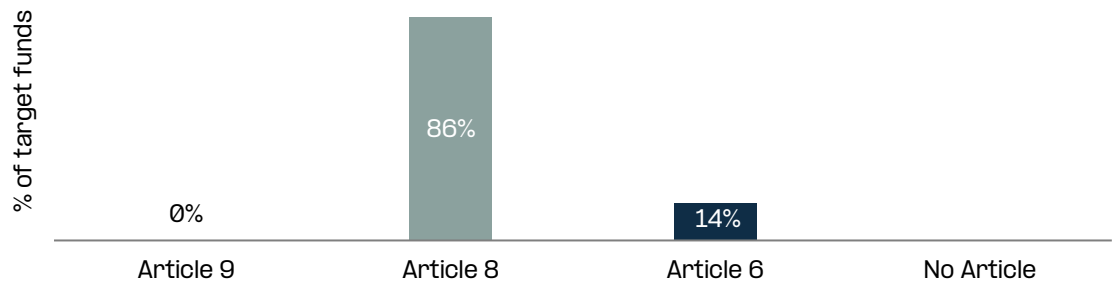
The fund encourages the fund managers of target funds to incorporate sustainability factors into the various areas of their operations. Evli Infrastructure monitors and assesses the fund managers' ESG practices and performance regularly through its annual ESG survey ,and the target funds' own ESG reporting. The fund engages in active cooperation with the aim of reducing the likelihood of sustainability risks materializing. In addition, it encourages management companies to report climate data and set their own climate targets.

The fund uses the following metrics to measure the implementation of the environmental and social characteristics promoted by the fund:

- The proportion of capital invested in renewable energy
- the proportion of target funds whose management companies report on their funds' carbon intensity
- the proportion of management companies that have climate targets,
- the proportion of management companies that take account of and report on the principal adverse impacts on the environment and society (PAI indicators) of their investment decisions

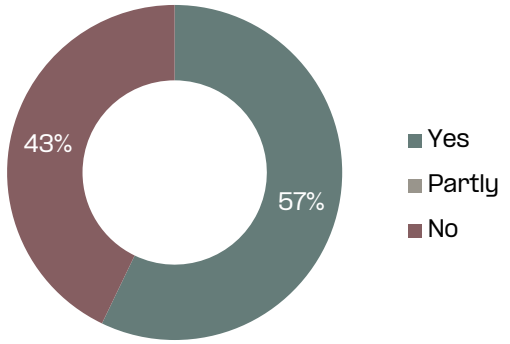
Evli Infrastructure Fund II reports separately on the achievement of the promotion of sustainability factors in accordance with the Sustainable Finance Disclosure Regulation.

EVLI INFRASTRUCTURE FUND II TARGET FUNDS



86% of the Evli Infrastructure Fund II target funds are classified Article 8 and 14% of the target funds are Article 6 funds.

FUND MANAGERS THAT CONSIDERS AND REPORTS PAI[1] INDICATORS (% OF TARGET FUNDS)



57% of the target funds consider and report Principal Adverse Impact (PAI) indicators, whereas 43% of the target funds do not consider and report PAI indicators currently.

Fund managers that track and report PAI indicators will publish their PAI statements later in 2026. Despite asking the target fund managers to provide data on PAI indicators, Evli Infrastructure will not be able to provide an accumulated PAI statement on a fund–of–funds level due to limited availability of the data.
